

CASE STUDY

Kosher Gardens produces high quality kosher vegetables grown in their own specialty greenhouses in Mexico. Their state-of-the-art facility located in Allentown, PA includes various sophisticated machinery which further continues their extensive process.

GreenLight stepped in to wade through the complex structures of rates, tariffs, and bills to find billing areas and potential exemptions that could have been taken advantage of. **GreenLight** operated on Kosher Gardens' behalf, and completed a thorough audit of their energy spend.

GreenLight experts discovered incredible opportunities for Kosher Gardens, emerging with great savings. Kosher Gardens will benefit significant ongoing savings as a result of **GreenLight's** comprehensive knowledge and work.

“Due to the sophisticated machinery in our plant, we suspected that we might be entitled to some credits or reclassifications. GreenLight proved our suspicions to be accurate, and corrected our utility rates. Their knowledge and experience paid off for us.”

-Chesky Seitler, COO
